

Required parameters for MODBUS communication with stm32

1. Serial parameters
 - baud rate (e.g. 9600, 19200)
 - Data bits (8)
 - Parity (None / Even / Odd)
 - Stop bits (1 or 2)
 - typical: 9600-8-N-1
2. Device role: master/slave
3. Request and response frame format
4. Timing Rules: Silent interval (frame boundary), Inter-byte gap
5. Receive Strategy (How To Detect a Frame)
6. Slave ID
7. Function codes
8. Register map (addresses, size, meaning)
9. CRC-16 Modbus
10. 3.5 char silent time
